

The Fillmore's Jazz Years

No AI was used

Composition plan:

The full plan is in composition-plan.html, with one row per positioned, layered, clipped, rounded, or shape-wrapped element. It was drafted before implementation and amended where implementation changed the decision. The figure row was updated when the media choice moved from an illustration to an archival photograph and again when the phot was kept as an uncropped scan.

Browser-support and fallback record

Position:sticky – story guide

If unsupported, the guide falls back to static and sits in normal flow above the story. It is applied only at min-width 52 rem and min-height 32 rem, so short or narrow viewports get the static list either way. <https://developer.mozilla.org/en-US/docs/Web/CSS/position>

clip-path: polygon() – feature photo

Wrapped in @supports, so unsupported browsers show the full rectangle with rounded corners and lose no content. <https://developer.mozilla.org/en-US/docs/Web/CSS/clip-path>

Shape-outside: circle() and shape-margin – vinyl record graphic

Wrapped in @supports plus a min-width 30rem query. Otherwise the record sits above the text and paragraphs read full width. Note: The W3C CSS validator does not yet recognize these properties, though both function correctly in current browsers.

<https://developer.mozilla.org/en-US/docs/Web/CSS/shape-outside>

<https://developer.mozilla.org/en-US/docs/Web/CSS/shape-margin>

Logical properties – throughout

Properties such as inset-block-start and inset-inline-end are Baseline. Physical property equivalents degrade predictably, and layout is unaffected in a left to right context.

https://developer.mozilla.org/en-US/docs/Web/CSS/CSS_logical_properties_and_values

Custom properties and clamp() – tokens and type scale

Both are Baseline. A browser without variable support should leave unstyled but readable text which is acceptable graceful degradation.

https://developer.mozilla.org/en-US/docs/Web/CSS/--*

<https://developer.mozilla.org/en-US/docs/Web/CSS/clamp>

:focus-visible – all focusable elements

Older browsers fall back to :focus behavior, so focus stays visible.

<https://developer.mozilla.org/en-US/docs/Web/CSS/:focus-visible>

@supports – feature detection wrapper

Used to gate the clip-path and shape enhancements so their fallbacks apply cleanly.

<https://developer.mozilla.org/en-US/docs/Web/CSS/@supports>

Layer System

- --layer-base: 0
- --layer-raised: 10 - pull quote
- --layer-raised: 20 - story guide
- --layer-raised: 30 - skip link

The decorative pull-quote glyph uses a local z-index: -1 inside it's parent's stacking context, painting above the quote background but below the text. Stacking contexts are created only where needed (skip link, story guide, pull quote, clipped image) and each is noted in the composition plan.

CSS Validation

The three reported errors are false positives: the validator does not recognize shape-outside and shape-margin, though both are Baseline and work correctly.

W3C CSS Validator results for TextArea (CSS level 3 + SVG)

Neighborhood Built a Scene, Then Lost It

From the 1940s through the 1960s, San Francisco's Fillmore District was a mostly Black neighborhood so thick with jazz, blues and soul clubs that people called it the Harlem of the West. Then the city decided the neighborhood needed fixing.

L2-L3 · The Neighborhood That Survived the Fire

The Fillmore became a destination by accident. The 1906 earthquake and fire leveled much of San Francisco, but Fillmore Street came through largely intact, so City Hall and the downtown department stores moved a mile west and set up shop there. What had been a quiet commercial street turned into

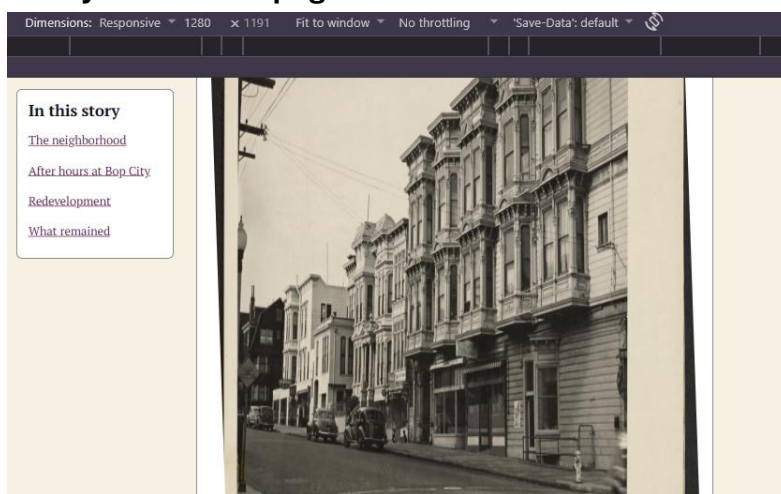

Browser zoom to 200%, then tabbing through the page. Every interactive element is reachable, focus ring visible on each, sticky guide disengages.

Long title and double paragraph test

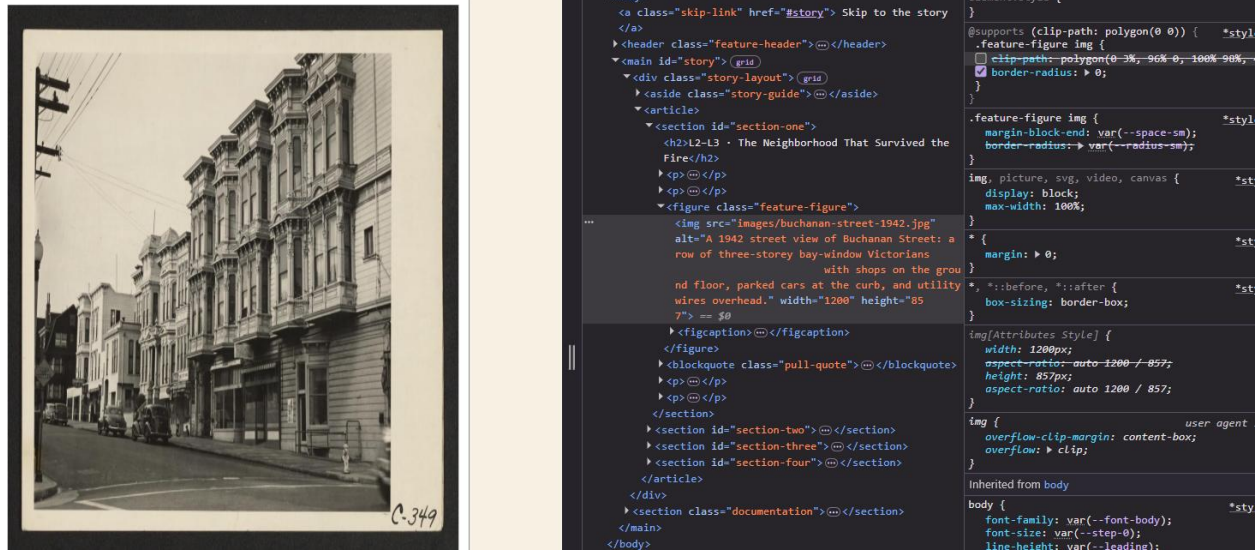

Temporary lengthened the title and paragraphs and the badge never overlaps the title, and text clears the float and returns to full measure.

Sticky behavior at page and section boundaries

Scrolling at 1280px from the top to bottom and the guide sticks at the top and releases at the end. Never overlaps the documentation section.

Clip-path and shape-outside disabled

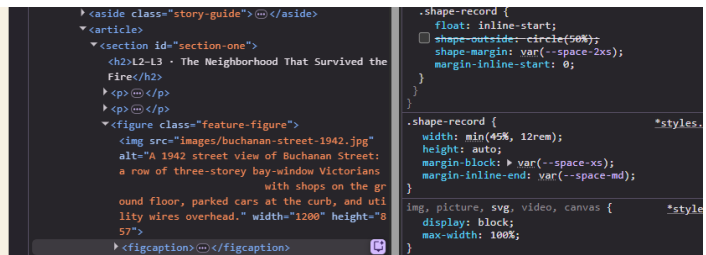

in five of the certificates awarded across San Francisco had been redeemed.

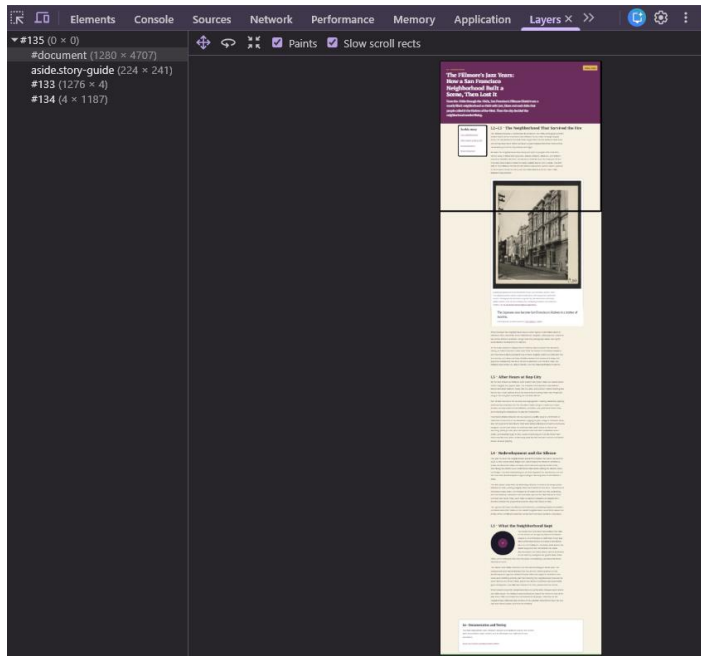

L5 · What the Neighborhood Kept

The house that held Bop City outlived the club. In the 1970s, as the agency cleared the blocks around it, the Victorian at 1690 Post Street was lifted off its foundation and moved two blocks west to 1712 Fillmore. The back room where the music happened did not survive the move. Marcus Books, the oldest Black-owned bookstore in the country, occupied the ground floor from 1980, and in February 2014 the city made the building a landmark for both

Stacking context: Confirmed only the documented stacking contexts exist.

Confirmed that each context in the Elements panel by checking in the property that created it (skip link, guide, and pull quote with z-index and position; and the figure image via clip-path)

Code Defense

Layout

The primary layout is two-column CSS grid `.story-layout: 14rem 1fr` at min-width 52rem. Positioning is used only for bounded spatial relationships, the badge, the sticky guide, the pull-quote overlap, and the skip link. It is never to build columns or place body text. This keeps the document readable in source order with CSS disabled and lets every region reflow without fixed heights.

The three positioned relationships in L3

Anchored badge, the header is `position:relative` so the absolutely positioned `.issue-badge` is pinned to its top corner. The header reserves `padding-inline-end: 12rem` so the title can never run under the badge. Since an absolutely positioned element is out of flow and cannot reserve its own space. Below 52 rem the badge returns to normal flow.

Bounded sticky guide, `position:sticky` is contained by the `.story-layout` wrapper, so the guide releases at the end of the article rather than travelling over the documentation section. `Align-self: start` gives it room to move. The behavior is gated to min-width 52 rem and min-height 32rem so short or zoomed viewports keep a fully reachable static list.

Controlled overlap / pull quote

A negative `margin-block-start` pulls the quote up into an empty padding band reserved at the bottom of the figure (`padding-block-end: var(--space-xl)`), so the overlap crosses empty space only and never covers the photo or caption. The overlap is removed below 52 rem.

Layer system

Every z index comes from a four-step token scale in `:root`: base 0, raised 10 – pull quote, sticky 20 – guide, overlay 30 – skip link, No arbitrary high values. The ordering is deliberate: the skip link at 30 sits above the sticky guide at 20 so a keyboard user's focus is never covered. Stacking contexts are created only where needed, and the decorative pull-quote glyph uses a local z-index: -1 inside its parent's context so it paints above the quote background but below the text.

Decorative pointer safety

The pull-quote glyph is a `::before` with an empty content string, so it is absent from the accessibility tree, and the `pointer-events: none` so it can never intercept a click meant for the citation link beneath it. The record graphic is marked as `aria-hidden="true"` for the same reason, it carries no information.

Clip-path on an archival photo

The clip-path: polygon() trim is presentational. The image is a scan of an archival print, and the polygon only cuts into the print's mount border, which means no photographic content is removed, and the bottom right cut stays shallow so the WRA reference number "C-349" remains readable. The file itself is uncropped, the caption credits Dorothea Lange and links the uncropped original. The rule wrapped in @supports, so an un-supporting browser shows the full rectangle with rounded corners.

Shape-outside wrap

shape-outside: circle(50%) wraps text around the record because the graphic is a true circle. It is gated behind both @supports and a min-width 30rem query. Otherwise the record sits above the text and paragraphs read full width. The containing section uses display: flow-root to contain the float.

Design system and tokens

Colors, spacing, type scale, radius, and the layer scale are all tokens carried over from the Module 1 system, but re-themed to a jazz theme. Contrast was checked, Focus uses a dedicated blue token distinct from the link plum color and switches to white inside the plum header where blue would fail contrast.

Accessibility choices

The skip link is moved off-screen with transform rather than display: none, so it stays focusable and in the tab order. Focus uses :focus-visible so the ring shows for the keyboard users without flashing on mouse clicks. Alt text describes the photograph, the caption carries the credit. Logical properties are used throughout so the layout would flip correctly in a right to left language.
